

A team leader with a versatile set of skills. Problem solving oriented, strong analytical thinking, excellent communication and teamwork skills.

Work Experience

Full-time job: Ministry of National Guard Health Affairs | Mobile Developer - Team Leader: 2020 – present

Leading the NGHHA mobile team responsible for developing and maintaining the mobile apps hosted by the ministry and serving more than 100k users around the kingdom. Responsibilities start with monitoring and maintaining all aspects of the app development environment; insuring all servers are up and running, proactively resolving issues and regularly updating the environment. Responsibilities also include project management, technical analysis of business requests, planning and development of new app features to meet new business needs, app deployment and release management on the app stores. As the team leader, I am also responsible for reviewing and evaluating technical contracts, planning and distribution of tasks, and training of new team members.

a. Top technologies used:

- Web (html, JS, JQuery, CSS)
- Maven, Java, Spring Framework
- Apache Tomcat
- PL\SQL
- Cordova
- Git, Bitbucket, Sourcetree

b. Main apps:

- Patient Portal (خدمات المرضى)
- My Clinic (عيادتي)
- My Visit (زيارتي)

Full-time job: Hewlett-Packard Enterprise | Field Technical Specialist Consultant I: 2013 - 2018

Part of the deployment and maintenance team responsible for providing on-site technical installation, configuration and support services for HPE equipment for Enterprise customers. Duties includes:

Unpacking, rack mounting, positioning and stabilization of HPE equipment. Handling power, network and fiber cables, connection and integration with customer environment, and management within the rack and datacenter. Handling Power up, initialization and firmware upgrades of servers, storage, switches, tape libraries and virtual connect modules. Installation and initial configuration of Windows and Linux-based operating systems, and management software. Work with customers to configure server profiles, virtual connect modules and SAN zoning, and provide basic training and documentation. Work with specific action plans to troubleshoot and identify various hardware and software problems, analyzing logs, part replacement and testing. Work in a timely manner to meet customers' SLAs.
