

# Mishal Sultan Bin Slayim

Team Leader, Analyst and Project Manager

+966566159955  
mslayim@outlook.com  
Hateen, Riyadh, KSA

## Summary

Application Development Team Leader, Business and System Analyst and Project Manager with 9 years in the field of Software Development. Experienced in a wide range of business domains and technologies. Ability to manage projects and teams and achieve business objectives.

## Professional Profile

- Core-Competencies: Software Development, Leading the Team, Project management, Business and System Analysis, Agile/Scrum, Prototyping, Waterfall Model, Project Implementation, Technical Skills, Stakeholder and Vendor Interaction, , Resource and Budget planning, Quality Assurance, Gathering Requirements, Robust Communication, Leadership and Supervision, Process Improvements, Writing RFP
- Experience in ASP.NET, VB.NET, SharePoint 2013, Crystal Reports, .NET reports and Excel Reports, SSRS, PowerBuilder, Web Services, WCF Services, MVC, SQL Server, XML, HTML, JQuery, K2, Tableau, Kofax, Microsoft Project, Microsoft Visio
- Experience in Credit, Finance, Research, Legal, Mortgage and Insurance domains
- Key Deliverables in the present role: Responsible for managing the team and projects, IT Budget/ RFP and contract management, performing business and system analysis, integration points, implementation and maintaining portals and various applications, delivering business projects, managing the day to day activities, Ensuring projects are delivered to quality, on time, within budget, and in line with users requirements and satisfaction

## Job Experience Summary

|   |               |                                                                  |
|---|---------------|------------------------------------------------------------------|
| • | 2015- Present | SIDF, Riyadh - Working as a Applications Development Team Leader |
| • | 2014 – 2016   | SIDF, Riyadh - Worked as Project Manager                         |
| • | 2013-2014     | SIDF, Riyadh - Worked as Business and System Analyst             |
| • | 2009 – 2013   | SIDF, Riyadh - Worked as Software Engineer                       |

## Other Professional Experience

- Supervisor for Digital Signature Registration Authority (NCDC) 2016 - Present
- Member of IT steering committee for the e-government transactions (Yesser) 2016 - Present
- Member of the spin-off Committee for Kafalah from Saudi Industrial Development Fund (2015)
- Vice-chairman of the proposals evaluation committee for IT applications development (2014, 2015)
- Member of the Building Committee for relocation of Kafalah to the new building (2014)
- Worked as Administrator for bluecoat Proxy (2011,2012)

# Education

---

## 2004 - 2009 Al-Imam Mohammad Ibn Saud Islamic University

Bachelor Degree in Information Systems from the College of Computer and Information Science, Riyadh , KSA

# Languages

---

- Arabic: Native
- English: Fluent

# Awards

---

- Received the Excellence Award, for my best performance in the organization level in 2016
- Promoted as Application Development Team leader in 2015
- Service award from Saudi Industrial Development Fund, 2014

## Projects Profile

---

### Project # 1:

- Project : E-Services implementation for Kafalah Program
- Duration : 24 months
- Technology : ASP.NET, C#, SharePoint 2013, SQLSERVER 2014 , K2
- Team size : 10

Design, develop and implement an integrated web enabled business solution system. This involves the workflows for Kafalah departments which include 80 processes via 14 professional services. The output of this process will enable SIDF (Kafalah) to process the guarantee electronically based on the request initiated from banks. This also includes the study, review and approve done by Kafalah thereby enabling decision making for issuing, renewing, amending, cancelling, terminating and liquidating the guarantees. The services include:

- Automate business processes (workflow)
- Submit the applications and track their status online by banks via portal
- Integration with Document Management System to attach, scan and save multiple formats
- Automatic calculation of guarantee fees and integration with Finance System to update the fees
- Digital signature and approval matrix for all divisions/units and activities
- Processing applications via workflow and Kafalah committee is held automatically by system
- Integration with external agencies such as NCDS, Yesser, and Elm
- Search functionality and keeping the historical data of any task, modification, or action
- System allows user to approve, review, rework or reject the task/file
- System generates regular alerts/ notification about pending, completed and rejected tasks via Email/SMS
- Automatic Assignment task or delegate it to other user, and task list to allow users identify their tasks
- Escalate the delay automatically if application is not processed within agreed time
- Generate Reports supported with charts and export functionality

### Contribution:

- Initiating the project by developed project charter and identified the stakeholders
- plan and Manage the resource, scope, cost, schedule and change request (commercial and non-commercial)
- Prepare the weekly progress report includes tasks status, completion %, and identify issues and risks
- Tracking activities against the project schedule and update it to include agreed changes
- Involved in business analysis, design the workflow and processes, study of impact and Performed gap analysis to understand the current business process based on the BPR
- Worked with users and management to collect their needs and requirements and define the scope
- Interacted with vendor and stakeholders to execute project works which include Requirement Specifications, Design, Development, QA and Bugs fixing, UAT and deployment
- Worked with consultant to prepare AS-IS & TO-BE assessment report and provide the BPR document
- Conducted workshop for the Banks and users for using the eservices
- Ensuring eservices are delivered to quality, on time, within budget, and in line with Kafalah requirements
- Launch eservices (GO LIVE) with actual data in releases and made an operation plan

## Project # 2:

- Project : Kafalah Management System
- Duration : 6 months
- Technology : ASP.NET, C#, SharePoint 2013,SQLSERVER 2014 , K2
- Team size : 5

Design and implement Kafalah Management System which allows Kafalah, banks and SMEs to track their application online and to view for all historical information processed via E-services and related to Bank Request, Guarantee status, Fees, SMEs, Courts, Mortgage and Insurance and Committee. The system includes:

- Maintains Assignment, Delegation and Escalation history, Kafalah Status, Bills and Fees, Banks Requests, Liquidation cases, Credit Assessment, Legal Study, Committee Decisions
- Integration with Document Management System to view, share, and print document
- System sends notifications/alerts via email automatically based on business rules
- Generate reports supported with charts with export functionality

### Contribution:

- Initiating the project by developed project charter and identified the stakeholders
- plan and Manage the resource, scope, cost, schedule and change request (commercial and non-commercial)
- Prepare the weekly progress report includes tasks status, completion %, and identify issues and risks
- Tracking activities against the project schedule and update it to include agreed changes
- Interacted with vendor and user to execute project works which include Requirement Specifications, Design, Development, QA and Bugs fixing, UAT and deployment
- Worked with business to collect their needs and requirements and define the scope
- Ensuring system are delivered to quality, on time, within budget, and in line with Kafalah requirements
- Obtained User acceptance, launch the system (GO LIVE)

## Project # 3:

- Project : Legal Management System
- Duration : 6 months
- Technology : ASP.NET, C#, SharePoint 2013,SQLSERVER 2014 , K2
- Team size : 5

Design and implement Legal Management System which allows Legal consultant to establish and process cases in courts , follow the cases and update the details/status for each case online. System maintains details about cases, evidences and documents and allow user to upload document against each case. The system includes:

- Maintains and track details about cases, evidences and documents and integration with other systems to capture guarantee information and fees and DMS to upload and scan the documents
- System generates alerts for dates of next hearing, court appointment
- system serializes evidence, leads and attachments hierarchically as part of a case
- Generate reports supported with charts with export functionality

### Contribution:

- plan and Manage the resource, scope, cost, schedule and change request
- Prepare the weekly progress report includes tasks status, completion %, and identify issues and risks
- Tracking activities against the project schedule and update it to include agreed changes
- Interacted with vendor and user to execute project works which include Requirement Specifications, Design, Development, QA and Bugs fixing, UAT and deployment
- Worked with business to collect their needs and requirements and define the scope
- Integration with other applications
- Ensuring system are delivered to quality, on time, within budget, and in line with Kafalah requirements

## Project # 4:

- Project : Finance Management System
- Duration : 7 months
- Technology : ASP.NET, C#, SharePoint 2013,SQLSERVER 2014 , K2
- Team size : 4

Design and implement Finance Management System to manage and maintain Kafalah fees and bills and their status against each Kafalah under Kafalah accounting. This system calculate Kafalah fees automatically based on the business rules and allow bank to generate the bills and view their fees. The system includes:

- Workflow used to complete and approve any Financial transaction
- Create accounting entry and electronically send it to SIDF general ledger system via web service
- Integration with DMS to upload and scan the documents
- System sends notifications and alerts automatically based on business rules
- Generate financial reports supported with charts with export functionality

### **Contribution:**

- plan and Manage the resource, scope, cost, schedule and change request
- Prepare the weekly progress report includes tasks status, completion %, and identify issues and risks
- Tracking activities against the project schedule and update it to include agreed changes
- Analyze GL system and describe how finance system send accounting entry and
- Interacted with vendor and user to execute project works which include Requirement Specifications, Design, Development, QA and Bugs fixing, UAT and deployment
- Worked with business to collect their needs and requirements and define the scope
- Ensuring system are delivered to quality, on time, within budget, and in line with Kafalah requirements
- Obtained User acceptance and launch the system (GO LIVE)

## Project # 5:

- Project : Online Payment
- Duration : 6 months
- Technology : ASP.NET, SharePoint 2013,SQLSERVER 2014 , Web Service
- Team size : 6

Design and implement Online Payment Service to allow banks to select and pay their bills online via Portal. This solution integrated with Riyad Bank (Service Provider) via safe communication channels. Service Provider receives the payment as (SARIE incoming payment), it identifies the payment as KAFALA from the beneficiary bank account number which should be SIDF client number linked to the bill number. The Solution includes :

- Update and maintain the record of payments and their status and generate the receipt
- Send the requisite information to the payment gateway/ bank
- Send notification by email, SMS towards acknowledgement of receipt of payments to payee
- Roll back unsuccessful transaction back into the payee's account
- Interfaces with Finance System to update the details about collection/refund of fees and deposits

### **Contribution:**

- Contact and coordinate with Riyad Bank (Service Provider) to provide the online payment service
- Meeting with Service Provider team to make the agreement and provide the business requirements
- Define Business needs and prepare the BRS
- plan and Manage the resource, scope, cost, schedule and change request
- Tracking activities against the project schedule and update it to include agreed changes
- Worked with service provider and vendor to execute project works which include Requirement Specifications, Design, Implementation, QA and Bugs fixing, UAT and deployment
- Ensuring system are delivered to quality, on time, within budget, and in line with Kafalah requirements
- Conducted workshop between Kafalah, vendor and Rivad Bank for testing the service

## **Project # 6:**

- Project : Business and System Settings
- Duration : 3 months
- Technology : ASP.NET, SQLSERVER 2014
- Team size : 2

Develop Business and System Settings which facilitate the centralized storage and management of Business rules and policies, wherein Business users (Admin) can make changes to the Kafalah rules and policies and reflect the changes on the relevant eservices and applications without depending on IT. The Solution includes :

- Manage the look up tables and Change Kafalah durations, amount and parameters of fees
- Enable and disable commercial activities, Banks and Regions
- Manage the KPIs and SLAs and Interface with all eservices and applications

### **Contribution:**

- Define Business needs, Study of impact and prepare BRS
- plan and Manage the resource, scope, cost, schedule and change request
- Tracking activities against the detailed project plans
- Worked with vendor to execute project activities which include Requirement Specifications, Design, Implementation, QA and Bugs fixing, UAT and deployment
- Ensuring system are delivered to quality, on time, within budget, and in line with Kafalah requirements
- Integration with eservices and business applications

## **Project # 7:**

- Project : Kafalah Information Management System
- Duration : 6 months
- Technology : ASP.NET, C#,SQLSERVER 2014
- Team size : 3

Develop Kafalah Information Management System which includes reports about the operational details that reflects current activity in Kafalah. Operational reporting is intended to support the day-to-day activities of the Kafalah, Banks and SMEs.. The system includes:

- 200 Reports cover all the activates in Kafalah Departments
- Generate periodic, Statistical and analytical reports and supported with charts and export functionality
- Customizable Reports to allow user to build his own reports and defined filters, sorts and selections
- Ability to access the data from different modules

### **Contribution:**

- Involved in describing the reports features, parameters and specifications
- plan and Manage the resource, scope, cost, schedule and change request
- Prepare the weekly progress report includes tasks status, completion %, and identify issues and risks
- Tracking activities against the project schedule
- Define business reports based on KPIs that have been defined
- Interacted with vendor and user to execute project works which include Requirements Specifications, Design, Development, QA and Bugs fixing, UAT and deployment
- Ensuring system are delivered to quality, on time, within budget, and in line with Kafalah requirements

## **Project # 8:**

- Project : Performance Dashboard
- Duration : 4 months
- Technology : Tableau, SQLSERVER 2014
- Team size : 2

Design and Develop performance dashboard to monitor Kafalah status and activity including details of transaction with banks and other divisions and units within Kafalah Program. Dashboard can provide the management with the required information in order to make decision. Dashboards will have the following:

- 12 Interactive dashboards developed with drag and drop facility and connected to multiple data sources
- Scorecard (status of Kafalah applications received, pending with, total time spent, fees status)
- Kafalah processed in various combinations, such as daily, weekly, monthly, quarterly and yearly manner
- Dashboards contain various Interactive charts, maps and tables and they are dynamic to show performance of departments, employees, SMEs and banks instantly
- system analyzes the performance over time to be able to measure KPIs with varying reporting
- system has built-in KPIs that are extendable and can be modified
- System allows users to define and identify the set of parameters to be monitored

### **Contribution:**

- Coordinated with the business to collect the key performance indicators (KPIs)
- Proof of concept for Dundas, Tableau and MS BI tool.
- Define the Data Model which can be used as source in dashboards
- plan and Manage the resource, scope, cost, schedule and change request
- Prepare weekly status report and Tracking activities against the project schedule
- Interacted with vendor and user to execute project works which include Requirement Specifications, Design, Development, QA and Bugs fixing, UAT and deployment
- Ensuring they are delivered to quality, on time, within budget, and in line with management requirements

## **Project # 9:**

- Project : Document Management System
- Duration : 4 months
- Technology : Sharepoint, SQLSERVER 2014, Kofax
- Team size :2

Developed a document management system to be used to track and store electronic documents and scanned documents which are submitted by Banks and Kafalah online through eservices. DMS includes:

- Create, scan, upload, share, view and update the document and maintain its properties
- System has the facility to Optical Character Recognition (OCR)
- Manage the versions of the documents and Check in/out feature
- Allow the user to search information within document by keying keywords
- Organize documents into hierarchical storage such as folders and subfolders
- Linked with all eservices/applications where there is a functionality to upload

### **Contribution:**

- Involved in providing functional requirements and Defining the Business needs
- Plan and Manage the resource, scope, cost, schedule and change request
- Prepare the weekly progress report includes tasks status, completion %, and identify issues and risks
- Tracking activities against the project schedule and Update it to include agreed changes
- Interacted with vendor and user to execute project works which include Requirement Specifications, Design, Development, QA and Bugs fixing, UAT and deployment
- Ensuring system are delivered to quality, on time, within budget, and in line with Kafalah requirements
- Obtained user acceptance and launch the system (GO LIVE)

## **Project # 10:**

- Project : Internet and Intranet Web Portals
- Duration : 8 months
- Technology : Sharepoint 2013, SQLSERVER 2014
- Team size : 4

Design and develop Kafalah Intranet & Internet Web Portals and self eservices related to HR and Administrative Affairs Departments and also include the implementation of a Content Management System with ability to access applications and eservices via the portals. The Portals will have the following:

- The portals have provide a dynamic lists of Kafalah Program information, News, location , contact information, profile employees, Departments and categorized repository of documents.
- Portals provide polling and survey functionality
- Create, edit, delete and expire content and workflow for publishing of content
- The Portals provide basic and advanced search capabilities
- Careers service for public users to applying a job online and allow HR Dept. to receive the submitted applications and complete processes of selection and interview
- Training Service for SMEs to subscribe in the training courses published by the Kafalah and allow Kafalah to manage the courses, candidates and certificates.
- Web Portal for Arab Credit Guarantee Network to publish, share and manage their content and document by the relevant Arab countries
- Translation Service for employees to submit the translation request online and manage and complete the task by the translator via predefined workflow
- Maintenance Service for employees to request a maintenance service online and manage and complete the task by maintenance Dept. via predefined workflow
- Security Service for employees to request to allow visitors for entry online and manage and complete the task by Security Office via predefined workflow

### **Contribution:**

- Plan and Manage the resource, scope, cost, schedule and change request
- Prepare the weekly progress report includes tasks status, completion %, and identify issues and risks
- Tracking activities against the project schedule and Update it to include agreed changes
- Involved in gathering requirements and business/system analysis
- Interacted with vendor and user to execute project works which include Requirement Specifications, Design, Development, QA and Bugs fixing, UAT and deployment
- Ensuring system are delivered to quality, on time, within budget, and in line with Kafalah requirements
- Obtained user acceptance and launch the Portals (GO LIVE)

## **Project # 11:**

- Project : Yesser – Implementation of GSN Project
- Duration : 2 months
- Team size : 1

Implement of Government Secure Network (GSN) which will connect Kafalah with other government agencies over a fast, reliable, and secure network. Services will be provided from the Data Centers as well as from Agencies. Established the connectivity with Yesser over GSN to consume eservices for other government agencies.

### **Contribution:**

- Contact and coordinate with Yesser Program to connect with GSN
- Fill out and submit application forms and agreements which related to connecting to GSN
- Meeting with Yesser team to make the agreement and plan
- Tracking activities against the project plan
- Worked with Yesser & subcontractor to execute project works which include equipment supply, installation & configurations, cabling, connectivity to Yesser DC and Preparation of service publishing
- Provide necessary permission and approval to Yesser and subcontractor

### **Project # 12:**

- Project : National Centre for Digital Certification
- Duration : 3 months
- Team size : 4

Joined Kafalah to National Center for Digital Certification (NCDC) as Certification Service Provider (CSP) to issue and manage digital certificates, electronic signature tools and methods and any other associated services. The CSP is comprised of a Policy Administrator (PA) and a Registration Authority (RA), and will have the following:

- Established the digital certificate authentication for Kafalah transactions

- Processing of certificate application requests of subscriber.
- Issuing and managing digital certificates of subscriber.
- Comply with the NCDC (and CITC requirements for Commercial CSPs).

### **Contribution:**

- Contact and coordinate to join Kafalah Program to National Center for Digital Certification (NCDC)
- Meeting with NCDC team to make the agreement and plan
- Fill out and submit application forms and agreements which related to joining to NCDC
- sign off a non-disclosure agreement and review NCDC documents, policies and procedures
- Tracking activities against the project plan
- Worked with NCDC to execute project works which include preparation of Registration center, Policy Administrator and Registration Authority requirement, applying NCDC policies and procedures
- Activation the service and conducted the training
- Worked as Registration Authority Supervisor to approve or reject the Subscriber's registration request

### **Project # 13:**

- Project : Application Development and Support Project
- Duration : 24 months
- Technology : ASP.NET, SQL 2014 , Crystal Report, SharePoint 2013
- Team size : 6

Developed and maintained the existing applications in Kafalah by providing the required support to users and application and monitoring, measuring and assuring the performance of all applications. Operation Team is intended to support the day-to-day activities and will have the following:

- Deliver technical support for applications and technologies to Kafalah users, according to their needs
- Application maintenance such as changes, modifications, Fix bugs, troubleshoot and resolve problems.
- Analyze existing systems for any technical issues
- Testing and ensure any changes or enhancements with free bugs and errors
- All Software maintenance such as upgrades, reinstallations
- Regular backups for all databases and conduct recovery whenever required
- Database Administration
- Assist and support in the upkeep and maintenance of Internet/Intranet portals.
- Assume ownership of code throughout development, testing and production.
- Documentation updates

### **Contribution:**

- Responsible for planning and managing the resource, scope, cost, schedule and change request
- Writing RFP and project requirements
- evaluate the proposals submitted by the vendors
- Technical team interview, evaluation and selection
- Vice-chairman of the proposals evaluation committee for the project
- Tracking activities against the detailed project plans and updating project plans to include changes
- Interacted with vendor and user to execute project works
- Ensuring all tasks are delivered to quality, on time, within budget, and in line with user requirements

## **Project # 14:**

- Project : File Tracking System
- Duration : 5 months
- Technology : ASP.NET, SQL 2014
- Team size : 2

Developed the system in order to request files online and track the movement files from Archive room to other department and also maintain details about archive files. the system includes:

- Request files online, manage requests and register the details about files information and bar code
- Generate tracking report and Search functionality
- Audit trail and file reconciliation
- Quickly locate physical files
- Stop losing files by tracking the movement of files in the system (IN/OUT) by workflow
- System sends notifications and alerts automatically based on business rules

### **Contribution:**

- Involved in Requirements gathering and System analysis
- Understand users requirements and how they translate in application features
- Design creative prototypes according to specifications
- Performed Coding, Unit Testing, Bug Fixing and deployment as well.
- Build the reports by using Crystal Report
- Prepared Technical documents and User Manual

## **Project # 15:**

- Project : Research and Information Analysis Application
- Duration : 12 months
- Technology : ASP.NET, SQL 2014 , Crystal Report
- Team size : 3

Developed Research and Information Analysis Application for the Research Department to register and maintain all the information details about Requests, Banks, SMEs, Kafalah status and fees, Liquidation cases and default notifications to understand the trends in SME in Saudi Arabia and provide Statistical and analytical reports about the market and Financing SMEs and their needs . The application includes:

- Maintain details about the SMEs Financing Guarantee, banks, and SMEs
- Generate Analytical reports supported with charts and export functionality
- Dashboard to demonstrate Guarantees, regions, and Banks Trends
- Evaluate the performance of SME's based on past and existing data
- Evaluating the relationship between banks and Kafalah program
- Pivot table capability that allows Research team to select, reorganize and summarize a set of columns and rows to obtain a desired report and study

### **Contribution:**

- Involved in Requirements gathering, System analysis and study of impact
- Understand users requirements and how they translate in application features
- Design creative prototypes according to specifications
- Performed Coding, Unit Testing, Bug Fixing and deployment as well.
- Build the reports by using Crystal Report and .NET reporting
- Migrate the business data from Excel files to Application DB
- Prepared Technical documents and User Manual
