

Hafiz Qaisar Saeed

CONTACT

Dussur Head Office

Address: King Khaled international airport road, Riyadh Front, Building N4, Riyadh.

Cell: +966-535-111-927

Email: Hafiz.Qsaeed@gmail.com

Web: www.dussur.com

EDUCATION

University of the Punjab, Lahore

Bachelor of Science (B.Sc.) Computer Science.

2002-2006

Forman Christian College, Lahore.

F.Sc. Intermediate Higher Secondary Education.

2000-2002

Corvit Systems Lahore. 2005-2008

CCNA, CCNP, CCIP, CCIE, CCVP, CCSP trainings with hands on experience in lab environment.

PERSONAL

Name: Hafiz Qaisar Saeed.

Nationality: Pakistani

Date of Birth: 8th August 1981 **Marital**

Status: Married.

Driving License: Valid IQAMA is Transferable.

Email: hafiz.qsaeed@gmail.com

Reference: Can be provided if required.

SKILLS

English: Fluent with clean speaking skills.

Arabic: Basic skills to communicate with Saudis. Reading and writing skills as well.

Urdu: Native language.

CISSP (Certified Information Systems Security Professional) – Training
Implementing Cybersecurity Frameworks in Enterprise/Corporate networks
HCIE Huawei Certified Internetwork Expert (Passed on 21 Dec 2018)
CCIE Cisco Certified Internetwork Expert (Written + Lab in Sydney in 2009)
Zscaler Certified Cloud Administrator Training - Internet Access (ZCCA-IA)
Fortinet NSE 3 Training - Security-Driven Networking module
Microsoft Office 365 Intune MDM (Training MS-101)
CCIP Cisco Certified Internetwork Professional
CCNA Cisco Certified Network Associate

PROFESSIONAL EXPERIENCE

Since Jan 2019 till date on Arcom project for Dussur (ARAMCO Subsidiary)

Implementation of NCA's Cybersecurity Framework (National Cyber Security Authority)

Planning and Execution of NCA's Cybersecurity framework in enterprise to safeguard from internal and external threats to the organization. Execution of Annual Cybersecurity Assessment against NIST framework for vulnerabilities assessment and Penetration Testing.

Mitigating threats discovered in Monthly SOC reports

Mitigation of threats to upgrade the firmware, path management, blocking malicious IP addresses, domains, implementing IOCs to safeguard the organization from threats.

Proof Point Email Security Gateway

Executing Phishing Simulation campaigns using Proof Point Security Education Platform. Using Proof Point Training Modules for End-user awareness to prepare them as first line of defense. Managing Emails in quarantined folders of SPAM, Spoofed, Phish, Malware and Bulk categories, End-user Digest policy to release quarantined emails.

Z scaler Cloud Administrator - Internet Access (ZCCA-IA)

Managing Z Scaler Internet Access over cloud, protecting the infrastructure with state-of-the-art features like, Malware Protection, Advanced Threat Protection, URL & Cloud App Control, Bandwidth Control, Z Scaler Client Connector Portal, Interactive Reports and Threat Insights.

Fortinet - Security-Driven Networking module

Hands-on Experience on FortiGate firewall 201F v6.48 build 1914. FortiGate Security Fabric, SD-WAN Zones, Traffic Shaping Policy, Firewall Policies, HA, Firmware upgrades, Security Profiles, Web Filter, IPS, Antivirus, SSL VPN for remote access, logs and Reports.

Microsoft Office 365 Intune MDM

Managing corporate devices via Microsoft Intune using company portal with device inventory and its tracking. Wiping out in case if damaged or stolen. Compliance and Conditional Access to harden the security posture using E5 license.

Cisco-Huawei Enterprise Data Center Migration Expert

Administering Huawei Core Switches, Aggregation and Access layer for corporate environment. Expert in Data Center migration from Cisco to Huawei devices with troubleshooting.

Wireless LAN deployment Expert in Enterprise Environments

Design and implementation of Wireless (Wi Fi) networks. Dot1x authentication, Portal Authentication, 3rd party SMS gateway integration.

Microsoft Office 365 Administration (Azure AD, SharePoint, Exchange, OneDrive)

Managing a SAAS based solution by Microsoft Office 365 using Azure Active Directory. Exchange online for corporate email users and Groups, SharePoint with restricted sharing policies with external stakeholders, OneDrive backup policies for every user to comply with Information protection policy.

Data Com. & Security Engineer, Huawei, January 15, 2015 to December 2018

- Designing, Planning and implementing Network Solutions including Campus, Data Centers, Security, and BYOD Solutions for Enterprise markets.
- Designing & planning Integrated and interoperable solutions using different vendor's devices including Routers, Switches, Firewalls, WLAN, IOT Gateways, BYOD and NMS etc.
- Analyzing Existing network of customer and proposing appropriate solutions.
- Designing and implementing Proof of concepts (POC) as per customer's requirements.
- RFP writing & Analysis, Creating High Level Design and converting them to Low level Designs & Engineering Design Packages.
- Proposing new ideas to customers for efficient and secured Solutions.
- Conducting Security Analysis, Risk Assessment, and Vulnerability/penetration testing, Security policies.
- Evaluation of IP and Security Solutions including Implementation and migration plans.
- Supporting partners/Subcon and 3rd parties in implementation of projects. Etc
- Proof of Concept (POCs) – Executed in Enterprise Environments of Saudi Arabia
 - o Ministry of Health (MoH) POC
 - o Saudi Customs WLAN POC.
 - o Al- Inma Bank POC
 - o Al-Shaya International, POC.
 - o Saudi Fransi Bank
 - o Public Pension Agency POC
 - o Ministry of Finance POC.
 - o Ministry of Justice POC
 - o HERFY HQ, POC

MPLS Network Engineer/Team Lead East Region, Saudi Arabia May 2012- August2014 (Managed Services Transport MST project of STC)

- Responsible for O&M business of STC IP/MPLS network in East region for 2 years.
- Major responsibilities are to satisfy our client STC and further corporate customers like ARAMCO, MODA, Government ministries etc. Using best O&M practices, focus is to restore the effected services Within a specified SLA eventually getting customer's satisfaction.
- Major vendor's I am working on are Cisco, Juniper, Huawei, Lucent, Tellabs, and Siemens.
- On MPLS core network, I am responsible for O&M of Core CRS-1, Edge router 7613, Aggregator 7609, RTPes, GSR 12000, UPE 7606, UPE ME3400, Juniper T-640, MX-960, MX-480, M320, E320, ERX1440.Huawei Technologies,
- In case of big service effecting outages, It is my responsibility to reach on site immediately to restore The effecting services in coordination with DNOC/TAC and also to satisfy STC management who reach On site during troubleshooting.
- Activities I handled on sites during troubleshooting are chassis failure, module failures, IOS failures, Password recovery, Power failures on DCDP/Rectifier panels, STP issues causing power recycling of Nodes, Layer-1 Fiber optic issues, packet drop issues etc.
- Major activities like new chassis installation etc handled during MDTs in coordination with Cisco TAC.
- Designed /proposed and implemented backup links for core IP/MPLS network during disaster cases.
- To make sure the 100% PMR completion every month in order to achieve the targets and to keep an Eye on every single trouble ticket and to get feedback from field engineers

MPLS Network Engineer/Team Leader Central Region, Saudi Arabia January 2010 - May 2012

Long Distance Transmission Network Project of STC.

- Have been responsible for O&M business of STC IP/MPLS network in Central region for 2 ½ years.
- Major focus was to coordinate with my field team and to feedback our higher management and further STC management.
- Preparing, reviewing and maintaining all kind of technical report like IFAR, DOR, and OIR.
- Organize testing and measuring equipment utilized in O&M of IP/MPLS network like SDH analyzers, Optical Spectrum analyzer, Optical Power Meter, EXFO IP Network Analyzer etc.
- Able to handle all type of databases and standard office applications used in STC domain which includes RTTS, WFMS, MDT tool etc.
- Evaluation of staff and preparation of training material to field staff which includes basic trouble shooting And login procedures etc.
- Having capabilities to lead the team for any installation / O & M project of Telecom Technology.
- Following up the escalated issues to level3, fault handling and field activities.
- Reporting of major network design deficiencies leading to affecting services.
- Ability to plan and arranging TC/MDTs for entire network to keep it in smooth running. Ensures all network's TC/MDTs are implemented without any delay.
- Ensures network performance standards are kept within the highest quality of service and identifies significant areas that require further improvement.
- Use of RTTS (Remedy Trouble Ticketing System), tool for opening/closing of problem reports.
- PAT activities for new nodes and links especially for OLTs of Lucent and Huawei.
- Attended PAT activities for Huawei's NE40 routers in Riyadh city in different major exchanges.

Field Engineer, West Region, Saudi Arabia August 2008 – January 2010

Long Distance Transmission Network Project of STC.

- Started Job in Saudi Arabia on STC's giant MPLS network as field engineer in west region.
- Performed PAT activities, verification of core IP-MPLS links over DWDM core.
- Physical site inspection of core IP MPLS nodes like Edge 7613, Aggregator 7609, UPE7606, ME3400 etc.
- HOTO of MPLS core Juniper nodes like ERX-1440, E320.
- HOTO of ATM/DDN network and proper filing of all the nodes like GX-550, BSTDX-9000, Nortel Passport 7400, Basic node 8150, Cluster 8170 and preparing login procedures for staff.
- Troubleshooting MPLS core link in coordination with DNOC/TAC.
- Performed MDTs and attended service effecting outage cases.

Communication Engineer, DHL Pakistan.

August 2006 – August 2008

- Support, maintenance, upgrades, new installations and troubleshooting on the core networks Consisting of both Cisco and Juniper routers running Frame relay over OSPF.
- Migration of other ISPs with all services into the network. Installation of new POPs.
- Design, Re-Design, implementation and rollout of customer networks. Development and consultancy Of customized end-to-end solutions for customers. Supporting various implementations of special and Complex customer setups.

CORE CYBERSECURITY SKILLS

Implementing Cybersecurity Frameworks in Enterprise/Corporate networks

- NCA - National Cybersecurity Authority
- NIST - National Institute of Standards and Technology

Cybersecurity Risk Assessment

Identifying the various information assets that could be affected by a cyber attack (such as hardware, systems, laptops, customer data, and intellectual property), and then identifying the various risks that could affect those assets.

Developing Cybersecurity Policies and Procedures

Setting up the standards of behavior for activities such as the encryption of email attachments and restrictions on the use of social media. Getting Policy approval from the board and procedures approval from Risk & Compliance Committee.

Vulnerabilities Management

Identifying, evaluating, treating, and reporting on security vulnerabilities in systems and the software that runs on them. This, implemented alongside with other security tactics, to prioritize possible threats and minimizing their "attack surface."

Mobile Devices Security

Using various technologies, protecting sensitive information stored on and transmitted by laptops, smartphones, tablets and other portable devices. Implementing security policies Microsoft O365 Intune to harden the security posture on BYOD.

Identity and Access Management

Managing identities using Single Sign-On (SSO) for end user accounts with segregation of Duties (SoD) while implementing Privileged Access Management (PAM) for Administrators and 3rd parties to access the assets on-prem and over the cloud via centralized solution.

Penetration Testing

Simulating Cyber Attack to check for exploitable vulnerabilities. Supervising 3rd parties like HelpAg and ITS2 in Saudi Arabia to execute Penetration testing for on-prem and over the cloud applications and website.

Web Application Security

Taking security measures for websites to function as expected, even when they are under attack. Implementing security controls engineered into a Web application to protect its assets from potentially malicious agents.

Cybersecurity Event Logs and Monitoring Management

Helping 3rd parties to setup SIEM solution in order to export logs from all the company assets to a centralized SIEM and then to mitigate vulnerabilities as mentioned in Monthly SIEM reports.

Physical Security

Implementing Authorized access to sensitive places in the entity. Managing Access and Monitoring (CCTV) records. Security of devices and equipment inside and outside the entity's buildings. Protecting the information and technical assets of the entity from unauthorized physical access, loss, theft and vandalism.

Cryptography

The implementation of the cybersecurity requirements for encryption in the entity, e.g VPN and GRE tunnels. Applying Data encryption techniques during transmission and storage based on its classification and according to the relevant legislative and regulatory requirements.

Cybersecurity Incident and Threat Management

Developing security incident response plans and escalation mechanisms. Notifying the authority (NCA) when a cyber security incident occurs. Sharing alerts, proactive information, indicators of penetration, and reports of cybersecurity incidents with the Authority. Getting proactive information from the authority (NCA).

Asset Management

Defining and documenting and applying the policy of acceptable use of the information and technical assets of the entity. Classifying and labelling the entity's information and technology assets in accordance with relevant legislative and regulatory requirements.

Information System and Information Processing Facilities Protection

Protection from viruses, programs, suspicious activities and malware (Malware) on users' devices and servers using modern and advanced protection techniques and mechanisms and managing them securely. Managing update and fix packages for systems, applications, and devices (Patch Management).

Networks Security Management

Isolating the production environment network from the development and test environment networks.

Security and protection of wireless networks using secure means of identity verification and encryption. Restrictions and management of network ports, protocols, and services. Advanced protection systems to detect and prevent intrusions (Intrusion Prevention Systems). Domain Name System (DNS) security.

Data and Information Protection

Implementing cybersecurity requirements to protect the entity's data and information. Applying Classification and Labeling Mechanisms.

Backup and Recovery Management

Scope and comprehensiveness of backups for sensitive information and technology assets. Performing periodic check on the effectiveness of restoring backups. Recovering data and systems after exposure to cybersecurity incidents.

SOFT SKILLS & OTHER SKILLS

Toastmasters International

- ✓ President of Arabian Stallions Toastmasters International Club, Riyadh for the Year 2022
- ✓ Area 5 Director (Division N, District 79) – Toastmasters International

Interpersonal Skills

As a friendly, polite person, with positive attitude I work well with others and in the past often have proven myself to deal with difficult situations in a careful and considerate manner.

Learning Skills

I have a high capacity for learning, pick up new skills and ideas quickly, and generally thrive on challenges. Enthusiasm and creativity give me an edge on difficult projects.

Problem Solving Skills

My analytical skills help me troubleshoot problems and uncover root causes. I am creative and enthusiastic.
